Content

1 Introduction

The documentation includes the process how you can install the proconarum AddOn on your SAP ERP system, when you install it as a software component.

2 SAP ECC - Installation of Release CNMA 100_740

2.1 Prerequisites for the Installation of CNMA 100_740

2.1.1 Current SPAM/SAINT update

Verify that you have imported the latest SPAM/SAINT update into your system. To do this, compare the short text of the last imported SPAM/SAINT update with the short text of the SPAM/SAINT update in SAP Support Portal. If you find a newer version of the SPAM/SAINT update in SAP Support Portal, import it.

You can find more information about SPAM/SAINT in SAP Help Portal under https://help.sap.com/spmanager.

2.1.2 Prerequisite software components

Check whether the following prerequisites are met in your system:

Prerequisite software components

(see menu System→Status→Product Version→Details→ Tab: Installed Software Component Versions):

Prerequisite Software Components

SAP_BASIS	740 or higher
SAP_ABA	740 or higher
SAP_APPL	740 or higher
ASANWEE	100 or higher

Prerequisite support packages:

SAP_BASIS 740	Support package: 28
SAP_ABA 740	Support package: 28

SAP_APPL 740	Support package: 25
ASANWEE	Support package: 6

2.2   Preparing the Installation of CNMA 100_740

Import the required user languages for all installed components. Perform this language transport before the upgrade or installation of 100_740.

At the moment the following languages are provided:

- English

- German

2.3   Installation of CNMA 100_740

Log on to client 000 in your SAP system as a user with SAP_ALL rights. **Do not** log on with the use SAP* or DDIC.

Use Add-On Installation Tool (transaction SAINT) to start the installation or upgrade:

The software component package can be uploaded from the PC or from the application server (→ from folder /usr/sap/trans/EPS/in).

For more information, see the online documentation of SAP Add-On Installation Tool. To do this, use the help function in the toolbar.

3   After the Installation of CNMA 100_740

After the installation you can start with the configuration guide.

4 SAP S/4 HANA - Installation of Release CNMA 100_756

4.1 Prerequisites for the Installation of CNMA 100_756

4.1.1 Current SPAM/SAINT update

Verify that you have imported the latest SPAM/SAINT update into your system. To do this, compare the short text of the last imported SPAM/SAINT update with the short text of the SPAM/SAINT update in SAP Support Portal. If you find a newer version of the SPAM/SAINT update in SAP Support Portal, import it.

You can find more information about SPAM/SAINT in SAP Help Portal under https://help.sap.com/spmanager.

4.1.2 Prerequisite software components

Check whether the following prerequisites are met in your system:

Prerequisite software components

(see menu System→Status→Product Version→Details→ Tab: Installed Software Component Versions):

Prerequisite Software Components

SAP_BASIS	755 or higher	Support Package: 0001
SAP_ABA	75f or higher	Support Package: 0001
S4_CORE	105 or higher	Support Package: 0001

4.2 Preparing the Installation of CNMA 100_756

Import the required user languages for all installed components. Perform this language transport before the upgrade or installation of 100_756.

At the moment the following languages are provided:

- English

- German

4.3 Installation of CNMA 100_756

Log on to client 000 in your SAP system as a user with SAP_ALL rights. **Do not** log on with the use SAP* or DDIC.

Use Add-On Installation Tool (transaction `SAINT`) to start the installation or upgrade:

The software component package can be uploaded from the PC or from the application server (→ from folder /usr/sap/trans/EPS/in).

For more information, see the online documentation of SAP SAINT.

5 After the Installation of CNMA 100_756

After the installation you can start with the configuration guide.
